## ABOUT ME

Crazy about music and programming, I'm currently working at Nespresso in Lausanne as Senior Android Software Engineer to transform webviews into real native screens, improve the current state of the UI and build an Android SDK for their E-shop API. I have a multi disciplinary profile (full-stack/mobile development) that allows me to be independent. I love exploring and learning new things. With my experience I can realize the projects from analysis/architecture to development, I can work on front and/or back office, but also in mobile applications for smartphones, tablets or IoT devices.

## PREVIOUS WORK EXPERIENCES

### Lead full-stack software engineer @ Inotekk (Nice) JULY 2012 - SEPTEMBER 2016

Inotekk is an IT consultant company, I made a lot of missions for them, some of them are described below. I installed the company's software infrastructure such as SVN then Gitlab, Wiki. I install client's Linux servers for deployment of J2EE applications with PostgreSQL database. I develop JEE or Node applications, native/hybrid mobile applications for Android/iOS, also a lot of front with Bootstrap and Javascript ExtJS framework).

### Mobile software engineer @ PRO BTP (Cagnes/Mer France) - Inotekk mission FEBRUARY 2014 - FEBRUARY 2016

The aim of this mission was to set up a mobility pole. I, at least, doubled the productivity and lead the company to their technical choices by making prototypes (web hybrid, native or Xamarin applications). I created the mobile architecture in Android and iOS and define standards. I developed and maintained 2 white label applications "Essentiel" and "Santé" for iOS (Swift) and Android (Java), I created 5 different versions for PRO BTP partners. I also created few Android applications to internal usage. I made mobile training and passing knowledge to the team before the end of my mission.

### Full-stack software architect/engineer @ L.I.S.A. MARCH 2016 - PRESENT

L.I.S.A. is an home automation system base on voice commands and compatible with IoT devices from different protocols. This is a personal project, now open source based on Javascript (NodeJS as backend and Angular 5 as frontend) on a Raspberry PI. I also did an Android application and an Android Wear application.

### Lead software engineer @ Inotekk - Project Antalis APRIL 2013 - JANUARY 2014

Commercial operation of the Antalis brand to promote their new line of paper, "IMAGE".  
- Lead a team of 5 developers for 2 J2EE front and back office applications, front was Javascript ExtJS framework  
- Develop the web application (Cordova) for Android and iOS

### Freelancer (Nice France) JUNE 2011 - JUNE 2013

During this period I realized a lot of projects for myself or for my client, below is a selection. I learn a lot as a Freelancer, native and hybrid mobile development, client/project management and maintenance projects. I also done web project with different technologies like Javascript, HTML, CSS, SASS, Node.js, Python, PHP...

### Cybrodroid - Freelancer

Home automation application to drive your home from a phone or tablet. The user can turn off the lights or heating if he forgot to do it when he was at home. The customer is abroad (Slovakia), all exchanges were in English (email or Skype). I was in charge of the conception and development of the Android application.

### MEDImaging Case - Freelancer

This iOS and Android application for radiologists to share radios in different areas (muscular, neurological...) and give real examples of diseases for students, curious or professionals. I also developed the front and back office of the application (PHP, HTML, CSS, JavaScript, jQuery).

### Yes I camp - Freelancer

iOS and Android application to find campsites sort by proximity or note. Increase the visibility of the web site through mobile applications. Plug the application with Wordpress web site through webservice.

### Widgetoid- Freelancer (and personal project)

Android application that replaces the basic control widget system, offering more customization options and more features. Application downloaded more than 1,500,000 times, ranked among the 10 best free apps from Android Engadget.

## EDUCATION

2015 - 2016  
**Diploma of Software Engineering**  
CAMPUS ID, Sophia Antipolis, France

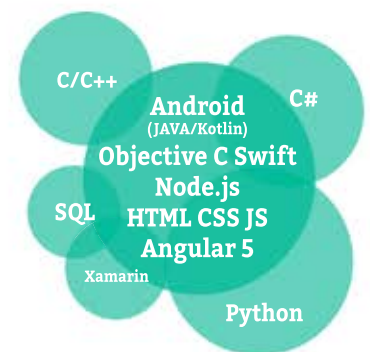

2008 - 2009  
**Bachelor SIL** (Software Informatics Systems)  
IUT, Sophia Antipolis, France

2006 - 2008  
**Bachelor GEII**  
(Electrical Engineering and Computer Science)  
IUT, Nice, France

2005 - 2006  
**High school graduation STI**  
(Industrial Sciences and Technologies)  
EUCALYPTUS, Nice, France

## SKILLS

### - PROGRAMMING LANGUAGES -

## LANGUAGES

- French mother tongue
- English read, written & spoken BULATS : C1

## ADDICT TO

**New technologies**  
Always looking, searching and testing new technologies

**Hackathons**  
Love working with people on new ideas and the competition

## HOBBIES

Music

Guitar

Travelling

Open Source

Bike

## PERSONAL SKILLS

**SOCIABILITY** ++

**ORGANISATION** +++

**CONCEPTION** +++

**CURIOSITY** +++
